Hello Marit,

The following points were discussed in our conference call today:

- 1) round the top of dump edge or make it convex
- 2) round the bottom of the dump or make it concave
- 3) make the line of the dump more undulating, possibly moving west in spots, giving it a less engineered look.
- 4) salvage 6 inches of topsoil and more were possible, understanding that some areas will have no topsoil.
- 5) provide strips of vegetation and islands of habitat either through piles of rock and creating hills and valleys

Thank you for the opportunity to comment.

Susan, Tom and Leslie
